Knewton Alta

**General, Organic, and Biochemistry | Table of Contents**

**Chapter 1: Introduction to Chemistry**
1.1 Chemistry and Its Applications
- Distinguish between chemistry and other scientific disciplines
- Identify common examples and applications of chemistry in everyday life

1.2 The Scientific Method
- Classify steps in the scientific method

**Chapter 2: Measurements and Calculations**
2.1 The SI System
- Recognize base units and abbreviations in the SI system
- Define the prefixes used in the SI system

2.2 SI Units
- Identify the SI units for length, volume, and mass
- Identify the SI units for time and temperature

2.3 Accuracy and Precision
- Distinguish between accuracy and precision

2.4 Significant Figures
- Express the number of significant figures in a measurement
- Apply the significant figure rules to solve calculations

2.5 Scientific Notation
- Convert between standard notation and scientific notation

2.6 Unit Conversions
- Solve single step conversion problems
- Solve conversion problems with multiples steps
- Convert between temperature scales

2.7 Density and Specific Gravity
- Perform calculations involving densities
- Compare substances using specific gravity

**Chapter 3: Matter and Energy**
3.1 Types of Matter
- Distinguish between elements and compounds
- Compare types of mixtures
- Classify the states of matter

3.2 Properties of Solids, Liquids, and Gases
- Identify examples of physical properties and physical changes
- Identify examples of chemical properties and chemical changes

3.3 Energy
- Differentiate between kinetic and potential energy
- Define the laws of conservation of matter and energy

3.4 Energy in Nutrition
- Calculate the caloric value of food

3.5 Specific Heat
- Perform calculations with specific heat

3.6 State Changes
- Explain the processes of melting, freezing, and boiling
- Explain the processes of evaporation, condensation, and sublimation

3.7 State Change Calculations
- Evaluate phase changes to determine the amount of heat absorbed or released

**Chapter 4: Atomic Structure and the Periodic Table of Elements**

4.1 Elements and Their Symbols
- Identify chemical symbols

4.2 The Periodic Table of Elements
- Examine the layout of the periodic table
- Classify elements according to their groups on the periodic table
- Interpret the elemental data on the periodic table

4.3 The Structure of Atoms
- Describe Dalton's atomic theory
- Identify subatomic particles

4.4 Atomic Number and Mass Number
- Use atomic and mass numbers to determine the number of protons, electrons, and neutrons in an atom

4.5 Isotopes
- Determine the composition of an isotope
- Use average atomic mass to determine relative abundance of isotopes

4.6 Electron Arrangement and Energy Levels
- Arrange electrons into energy levels

4.7 Electron Configurations
- Write electron configurations for elements
- Define quantum numbers

**Chapter 5: Ionic and Molecular Compounds**

5.1 Monatomic and Polyatomic Ions
- Identify and name common ions
- Identify biologically important ions
- Describe the physical and chemical properties of ionic compounds

5.2 Nomenclature and Structure of Simple Ions
- Name ionic compounds
- Determine the formulas of ionic compounds

5.3 Nomenclature and Structure of Compounds with Polyatomic Ions
- Write the names and formulas of compounds containing polyatomic ions

5.4 Molecular Compounds
- Define covalent bonds and molecular structures
- Convert between the name and formula for a molecular compound

**Chapter 6: Molecular Structure**

6.1 Lewis Dots and Structures
- Draw Lewis dot structures for atoms
- Identify the number of electrons in molecular and ionic structures

6.2 The Octet Rule
- Use the octet rule to determine the structure of molecules
- Use the octet rule to identify the presence of double and triple bonds

6.3 Electronegativity and Bonding
- Use electronegativity to determine bond polarity
- Predict bond type based on electronegativities

6.4 VSEPR Theory and Molecular Geometry
- Use VSEPR theory to predict electron pair geometry
- Compare molecular structure and electron-pair geometry
- Use VSEPR theory to predict molecular structure and electron-pair geometry
- Use VSEPR theory for molecules with five or more regions of electron density

6.5 Molecular Geometry and Polarity
- Predict the polarity of molecules

6.6 Introduction to Resonance
- Explain the sharing of electrons in resonance structures

6.7 Intermolecular Forces
- Identify the relationship between phases of matter and intermolecular forces
- Describe dispersion forces
- Describe dipole-dipole interactions
- Describe hydrogen bonding

6.8 Intermolecular Forces and Physical Properties
- Predict the effect that intermolecular forces have on physical properties

**Chapter 7: Chemical Reactions and Mass Relationships**

7.1 Avogadro's Number and the Mole
- Define the mole as a unit of measure

7.2 Atoms, Moles, and Mass
- Calculate formula masses
- Convert between grams and moles
- Convert between grams and number of atoms

7.3 Chemical Equations
- Represent chemical reactions as equations
- Balance chemical equations

7.4 Molar Ratios in Chemical Equations
- Calculate molar ratios

7.5 Mass Ratios in Chemical Equations
- Calculate the mass of products or reactants
- Identify limiting reagents
- Calculate percent yields

7.6 Types of Chemical Reactions
- Identify combination, decomposition, replacement, and combustion reactions
- Identify precipitation reactions by applying the solubility rules
- Identify the features of acid-base neutralization reactions
- Identify the components of oxidation-reduction reactions

7.7 Exothermic and Endothermic Reactions
- Compare and contrast exothermic and endothermic reactions

**Chapter 8: Properties of Gases**

8.1 Kinetic Molecular Theory of Gases
- Describe the postulates of the kinetic molecular theory of gases
- Convert between units used in gas law calculations

8.2 Boyle's Law
- Perform calculations to demonstrate the relationship between pressure and volume

8.3 Charles's Law
- Perform calculations to demonstrate the relationship between temperature and volume

8.4 Gay-Lussac's Law
- Perform calculations to demonstrate the relationship between temperature and pressure

8.5 Avogadro's Law
- Perform calculations to demonstrate the relationship between volume and number of moles

8.6 The Ideal Gas Law
- Perform calculations using the ideal gas law

8.7 Dalton's Law
- Perform partial pressure calculations

8.8 Gas Law and Mole Fractions
- Perform gas law calculations involving mole fractions

**Chapter 9: Chemical Solutions**

9.1 Solutions
- Distinguish between solute and solvent
- Identify the properties of solutions

9.2 Solutions of Electrolytes and Nonelectrolytes
- Classify strong, weak, and nonelectrolytes in aqueous solutions
- Identify the characteristics of ionic electrolytes
- Identify covalent electrolytes

9.3 Solubility
- Identify the factors that affect solubility
- Differentiate between saturated, unsaturated, and supersaturated solutions
- Recognize soluble and insoluble ionic compounds

9.4 Concentration: Mass Percent, Volume Percent, and Mass-Volume Percent
- Calculate mass percent
- Calculate volume percent
- Calculate mass-volume percent

9.5 Concentration: Molarity and Molality
- Calculate molarity
- Derive volumes and moles using molarity
- Perform molality and mole fraction calculations

9.6 Dilutions
- Identify the effects of dilution

9.7 Solutions, Colloids, and Suspensions
- Identify the properties of solutions, colloids, and suspensions

9.8 Osmosis and Dialysis
- Calculate osmotic pressure
- Identify types of tonicity and permeation

**Chapter 10: Equilibrium**

10.1 Rate of Chemical Reactions and the Collision Theory
- Define terms associated with reaction rates
- Recognize the postulates of collision theory

10.2 Factors That Affect Reaction Rates
- Determine the intensive properties that impact the rate of reactions
- Determine the impact that temperature, concentration, and catalysts have on reaction rates

10.3 Dynamic Chemical Equilibrium
- Describe chemical equilibrium
- Write equilibrium expressions

10.4 Equilibrium Constants
- Analyze and calculate equilibrium constants
- Differentiate between heterogeneous and homogeneous equilibria

10.5 Calculations of Equilibrium Constants and Concentrations
- Use concentration data to calculate equilibrium constants
- Use equilibrium constants to calculate unknown concentrations
- Use equilibrium constants to calculate changes in concentration

10.6 Le Châtelier's Principle: Effects of Pressure, Temperature, and Concentration on Equilibriums
- Predict the impact that changing a concentration will have on equilibrium
- Predict the impact that changing a pressure will have on equilibrium
- Predict the impact that changing temperature will have on equilibrium

10.7 Catalysts
- Identify the impact of catalysts on reaction rates

**Chapter 11: Acids and Bases**

11.1 Definitions and Identification of Acids and Bases
- Use physical properties, structure, and definitions to differentiate between acids and bases
- Predict acidity and basicity based on pH, pOH, and hydronium and hydroxide concentrations

11.2 Bronsted-Lowry Acids, Bases, and Conjugates
- Predict the role of each component of an acid-base reaction

11.3 Acid-Base Equilibrium
- Predict the formula of a conjugate acid or base
- Predict the products of acid-base reactions

11.4 Ionization Reactions
- Describe ionization reactions
- Use Kw to calculate concentrations of hydroxide and hydronium ions

11.5 Calculations with pH and pOH
- Convert between pH and hydronium ion concentration
- Define and calculate pOH and use it to predict basicity
- Use pOH in calculations

11.6 Strong and Weak Acids and Bases
- Calculate percent ionization
- Use Ka, Kb, pKa, and pKb in calculations

11.7 Factors That Impact Equilibrium
- Describe the impact that changes to the system have on equilibrium
- Describe the role of catalysts in equilibrium reactions

11.8 Reactions and Titrations
- Predict the product of reactions between acids and carbonates/bicarbonates or metals
- Calculate the molar concentrations of unknown solutions using titrations

11.9 Buffers
- Describe buffers and their purpose
- Perform calculations using the Henderson Hasselbalch equation
- Explain the role of buffers in the control of blood pH

**Chapter 12: Radioactivity and Nuclear Processes**

12.1 Types of Radiation
- Define the terms used in nuclear chemistry
- Differentiate between alpha, beta, gamma, and positron radiation

12.2 Nuclear Reactions
- Predict the products of alpha, beta, positron, and gamma decay

12.3 Radiation Measurements, Exposure, and Safety
- Identify the methods and units used in measuring radiation activity
- Convert between units of radiation activity
- Identify the health effects of exposure to radiation

12.4 Nuclear Decay and Dating
- Perform calculations involving the half-life of a radioisotope
- Discuss the requirements for determination of the age of an object by using radioisotopes
- Use reaction order in half life calculations

12.5 Nuclear Medicine
- Describe the use of nuclear decay in modern medicine

12.6 Nuclear Power
- Describe the causes, effects, and process of nuclear fission
- Describe nuclear fusion and contrast with fission
- Describe the operation of a nuclear power plant

**Chapter 13: Introduction to Organic Chemistry and Hydrocarbons**

13.1 Organic Molecules
- Differentiate between organic and inorganic compounds

13.2 Functional Groups and Structural Variation
- Identify organic functional groups
- Compare and contrast classes of hydrocarbons

13.3 Alkane Structure and Nomenclature
- Identify structural representations and physical properties of alkanes
- Identify isomers of alkanes
- Convert between alkane names and structures

13.4 Hybridization and Bonding
- Classify the hybridization of atoms and the types of bonds in organic molecules

13.5 Reactions of Alkanes
- Predict the outcome of alkane combustion reactions

13.6 Alkene Structure and Nomenclature
- Identify structural features, properties, and nomenclature of alkenes
- Differentiate between isomers of alkenes

13.7 Alkyne Structure and Nomenclature
- Identify structural features, properties, and nomenclature of alkynes

13.8 Reactions of Alkenes and Alkynes
- Predict the products of reactions of alkenes and alkynes

13.9 Structure and Nomenclature of Aromatic Molecules
- Identify structural features and properties of aromatic molecules

Knewton Alta

**Chapter 14: Alcohols, Phenols, and Ethers**

14.1 Structure and Nomenclature of Alcohols
- Identify the features of alcohols
- Convert between names and structures of alcohols
- Classify alcohols according to alkyl substituents

14.2 Properties of Alcohols
- Explain the physical and chemical properties of alcohols
- Demonstrate the effect of structure on the physical properties of alcohols

14.3 Reactions of Alcohols
- Predict the outcome of reactions of alcohols

14.4 Structure and Properties of Phenols
- Describe the physical and chemical properties of phenols

14.5 Reactions of Phenols
- Use resonance to predict stability and reactivity of phenols
- Demonstrate the effect of structure on the acidity of phenols
- Predict the outcome of reactions of phenols

14.6 Ethers
- Name ethers and recognize their physical and chemical properties

**Chapter 15: Aldehydes and Ketones**

15.1 Aldehyde and Ketone Structure
- Identify the features of aldehydes and ketones

15.2 Properties and Nomenclature of Aldehydes
- Describe the physical and chemical properties of aldehydes
- Convert between names and structures of aldehydes

15.3 Reactions of Aldehydes
- Predict the outcome of reactions of aldehydes

15.4 Properties and Nomenclature of Ketones
- Describe the physical and chemical properties of ketones
- Demonstrate the effect of structure on the physical properties of ketones
- Convert between names and structures of ketones

15.5 Reactions of Ketones
- Predict the outcome of reactions of ketones

**Chapter 16: Carboxylic Acids, Esters, Amines, and Amides**

16.1 Properties and Nomenclature of Carboxylic Acids
- Convert between names and structures of carboxylic acid
- Predict the outcome of reactions of carboxylic acids

16.2 Esters
- Identify the structural features of esters
- Convert between names and structures of esters

16.3 Hydrolysis of Esters
- Predict the products of ester hydrolysis

16.4 Amines and Amides
- Name amines and recognize their physical and chemical properties
- Predict the starting materials and products of reactions of amides

**Chapter 17: Carbohydrates**

17.1 Carbohydrate Structures and Classifications
- Differentiate between types of carbohydrates

17.2 Carbohydrate Structure and Chirality
- Identify chiral carbon atoms and chiral molecules
- Read and interpret Fischer projections
- Convert between open-chain structures of carbohydrates and Haworth projections

17.3 Oxidation and Reduction Reactions of Carbohydrates
- Predict the outcome of reactions of carbohydrates

17.4 Glycosides
- Identify glycosidic bonds and anomers

17.5 Polysaccharides: Carbohydrate Macromolecules
- Describe the structure and function of polysaccharides

**Chapter 18: Lipids**

18.1 Lipid Diversity
- Classify types of lipids

18.2 Fatty Acids
- Identify the structural features of saturated and unsaturated fatty acids

18.3 Triacylglycerols
- Identify the components of triacylglycerides
- Describe the chemical and physical properties of triacylglycerols
- Predict the outcome of reactions of triacylglycerols

18.4 Steroids
- Identify the structural features of biologically important steroids

18.5 Phospholipids
- Describe the structure and function of phospholipids

18.6 Cell Membrane Transport and Infrastructure
- Identify the components of the lipid bilayer
- Compare mechanisms of transport through membranes

**Chapter 19: Proteins**

19.1 Amino Acid Structure
- Identify the structure and function of amino acids
- Recognize the chemical diversity of amino acids

19.2 Amino Acids as Acids and Bases
- Predict the outcome of acid-base reactions of amino acids

19.3 Primary Protein Structure: Amino Acid Sequence
- Identify the structure of peptides and peptide bonds

19.4 Secondary Protein Structure: Alpha Helices and Beta Sheets
- Recognize the features of alpha helices and beta pleated sheets

19.5 Tertiary and Quaternary Protein Structure
- Distinguish between the four levels of protein structure

19.6 Enzymes
- Identify the features and biological relevance of enzymes
- Recognize effects of temperature and pH on enzyme activity
- Distinguish between competitive and noncompetitive inhibition

**Chapter 20: Nucleic Acids**

20.1 Nucleic Acids
- Identify the components of nucleotides

20.2 Phosphodiester Bonds
- Identify the components of phosphodiester bonds

20.3 The DNA Double Helix
- Describe complementary pairs in DNA structure

20.4 RNA
- Describe RNA structure and function

20.5 Protein Synthesis
- Describe the function on RNA in protein synthesis

20.6 Mutation
- Classify the types of genetic mutation

20.7 Viruses and Reverse Transcription
- Identify the structure and function of viruses

**Chapter 21: Metabolism**

21.1 Metabolism
- Identify the types of metabolic pathways

21.2 ATP
- Describe the relationship between ATP and energy

21.3 Digestion: Hydrolysis of Organic Macromolecules
- Describe the digestion of food

21.4 Coenzymes
- Compare the structures of NAD+ and FAD

21.5 Glycolysis
- Identify the steps in glycolysis

21.6 Fermentation
- Explain the fermentation of pyruvate

Knewton Alta

21.7 The Citric Acid Cycle
- Identify the steps in the citric acid cycle

21.8 Oxidative Phosphorylation
- Identify the components of the electron transport system
- Explain chemiosmosis
- Explain the relationship between electron transport and chemiosmosis

21.9 Oxidation of Fatty Acids and Degradation of Amino Acids
- Describe the oxidation of fatty acids
- Describe the degradation of amino acids
