

Finite Mathematics with Corequisite Support: A Targeted Review | Table of Contents

Chapter 1: Linear Equations

1.1 Lines

- Graphing Foundations
 - Rectangular coordinates
 - Graph linear equations
 - Find the slope of a line and interpret it
 - Graph a line given a point on the line and the slope
- Graphing Special Cases
 - Graph and find the equation of a vertical line
 - Find the equation of a horizontal line
- Finding the Equation of a Line
 - Use the point-slope form of a line
 - Find the equation of a line given two points
- Linear Applications
 - Use the slope-intercept form of a line
 - Solve applied problems involving linear equations

1.2 Pairs of Lines

- Pairs of Linear Equations
 - Show that two lines are coincident
 - Show that two lines intersect
 - Show that two lines are parallel
- Applications of Pairs of Linear Equations
 - Solve applied problems involving pairs of lines
 - Find the point of intersection of two intersecting lines

1.3 Applications in Business and Economics

- Applications in Business and Economics
 - Solve problems involving break-even point
 - Solve problems involving supply and demand equations

1.4 Scatter Diagrams; Linear Curve Fitting

- Analyze Scatter Diagrams
 - Draw and interpret scatter diagrams
 - Distinguish between linear and nonlinear relations
- Linear Curve Fitting
 - Use a graphing utility to find the line of best fit
 - Find an equation for linearly related data

Chapter 2: Systems of Linear Equations

2.1 Systems of Linear Equations; Substitution; Elimination

- Solving Linear Systems in Two Variables
 - Decide whether given values of variables are solutions of a system of equations
 - Solve systems of equations by substitution
 - Solve systems of equations by elimination
 - Identify inconsistent systems of equations containing two variables
-

- Express the solutions of a system of dependent equations containing two variables
- Applications of Systems of Linear Equations
 - Solve applied problems involving systems of equations containing two variables
 - Solve applied problems involving systems of equations
- Solving Linear Systems in Three Variables
 - Solve systems of three equations containing three variables
 - Express the solutions of a system of dependent equations containing three variables
 - Identify inconsistent systems of equations containing three variables

2.2 Systems of Linear Equations; Gaussian Elimination

- Introduction to Augmented Matrices
 - Write the augmented matrix of a system of linear equations
 - Write a system of linear equations from an augmented matrix
 - Perform row operations on a matrix
- Using Gaussian Elimination to Solve Systems
 - Solve a system of linear equations using Gaussian elimination
 - Solve a system of linear equations using technology
 - Use Gaussian elimination to identify an inconsistent system
 - Solve applied problems involving systems of equations
 - Express the solution of a system with an infinite number of solutions

2.3 Systems of m Linear Equations Containing n Variables

- Systems of m Linear Equations Containing n Variables
 - Analyze the reduced row echelon form of an augmented matrix
 - Solve a system of m linear equations containing n variables
 - Express the solution of a system with an infinite number of solutions
 - Solve applied problems involving systems of m equations containing n variables

Chapter 3: Matrices

3.1 Matrix Algebra

- Introduction to Matrices
 - Find the dimension of a matrix
 - Equality of matrices
 - Arranging data in a matrix
- Addition, Subtraction and Scalar Multiplication of Matrices
 - Find the sum of two matrices
 - Work with properties of matrices
 - Find the difference of two matrices
 - Find scalar multiples of a matrix
- Applications with Matrix Algebra
 - Solve applied problems involving matrices
 - Using technology to work with properties of matrices

3.2 Multiplication of Matrices

- Multiplication of Matrices
 - Find the product of two matrices
 - Work with properties of matrix multiplication
 - Applications with Matrix Multiplication
-

- Solve applied problems involving multiplication of matrices
- Using technology to multiply matrices

3.3 The Inverse of a Matrix

- Inverse of a Matrix
 - Find the inverse of a matrix using the Gauss Jordan Method
 - Use the inverse of a matrix to solve a system of n linear equations containing n variables
- Applications of the Inverse of a Matrix
 - Using technology to find the inverse of a matrix
 - Use matrices in cryptography
 - Solve applied problems involving the inverse of a matrix
- The Determinant and Cramer's Rule
 - Find the determinant of a 2×2 matrix
 - Find the determinant of a 3×3 matrix
 - Determine if a matrix is invertible using the determinant
 - Use Cramer's Rule to solve a system of n linear equations containing n variables

3.4 Applications in Economics (the Leontief Model), Accounting, and Statistics (the Method of Least Squares)

- Matrix Applications - Leontief Models
 - Economics application: the closed Leontief model
 - Economics application: the open Leontief model
- Matrix Applications - Total Monthly Cost
 - Accounting application: Finding total monthly cost
- Matrix Applications - The Method of Least Squares
 - Statistics application: Method of Least Squares and finding a transpose of a matrix

Chapter 4: Linear Programming with Two Variables

4.1 Systems of Linear Inequalities

- Graphing Linear Inequalities and Systems of Linear Inequalities
 - Graph linear inequalities
 - Determine whether a point belongs to the graph of a system of two linear inequalities
 - Graphing a System of Two Linear Inequalities
 - Graphing a system of Four Linear Inequalities
- Applications of Linear Inequalities
 - Solve applied problems involving systems of linear equalities

4.2 A Geometric Approach to Linear Programming Problems with Two Variables

- Solving Linear Programming Problems with Two Variables Graphically
 - Identify a linear programming problem with two variables
 - Solve a linear programming problem with two variables

4.3 Models Utilizing Linear Programming with Two Variables

- Applications of Linear Programming Problems with Two Variables
 - Solve applied problems using linear programming with two variables

Chapter 5: Linear Programming: Simplex Method

5.1 The Simplex Tableau; Pivoting

- Introduction to the Simplex Method
-

- Determine a maximum problem is in standard form
- Set up the initial simplex tableau
- Analyze a tableau
- Using technology to perform pivot operations
- Perform pivot operations

5.2 The Simplex Method: Solving Maximum Problems in Standard Form

- Solving Maximization Problems in Standard Form with Simplex Method
 - Solve maximum problems in standard form using the simplex method
 - Solve applied problems involving maximum problems in standard form
 - Determine if a tableau is final, requires additional pivoting, or indicates no solution

5.3 Solving Minimum Problems Using the Duality Principle

- Solving Minimization Problems in Standard Form Using Duality Principle
 - Determine a minimum problem is in standard form
 - Solve a minimum problem in standard form using the duality principle
 - Obtain the dual problem of a minimum problem in standard form

5.4 The Simplex Method for Problems Not in Standard Form

- The Simplex Method for Problems Not in Standard Form
 - Solve a maximum problem not in standard form
 - Solve a minimum problem not in standard form
- Applications for Problems Not in Standard Form
 - Solve maximum/minimum problems with equality constraints
 - Solve applied problems involving linear programming problems not in standard form

Chapter 6: Quadratic, Exponential and Logarithmic Functions

6.1 Functions

- Introduction to Functions
 - Examining functions: definition, notation, evaluation
 - Find the domain of a function

6.2 Quadratic Functions

- Exploring Quadratic Functions
 - Locate the vertex and axis of symmetry of a quadratic function
 - Graph quadratic functions
- Maximum and Minimum Values
 - Find the maximum or the minimum value of a quadratic function
 - Use the maximum or the minimum value of a quadratic function to solve applied problems

6.3 Exponential Functions

- Exploring Exponential Functions
 - Exploring exponential function evaluations
 - Define the number e
 - Graphing exponential functions
- Solving Exponential Functions
 - Solve exponential equations

6.4 Logarithmic Functions

- Converting Between Exponential and Logarithmic Form
-

- Change exponential expressions to logarithmic expressions
- Change logarithmic expressions to exponential expressions
- Exploring Logarithmic Functions
 - Evaluate logarithmic functions
 - Graphing logarithmic functions
 - Find the domain of a logarithmic function
- Solving Logarithmic and Exponential Functions
 - Solve logarithmic equations
 - Solving exponential equations using logarithms

6.5 Properties of Logarithms

- Properties of Logarithms
 - Work with the properties of logarithms
 - Write a logarithmic expression as a sum or difference of logarithms
 - Write a logarithmic expression as a single logarithm
 - Evaluate logarithms whose base is neither 10 nor e

Chapter 7: Finance

7.1 Interest

- Applications of Percents
 - Solve problems involving percents
- Simple Interest
 - Solve problems involving simple interest
 - Application: Pricing treasury bills
 - Solve problems involving discounted loans

7.2 Compound Interest

- Compound Interest
 - Determine the future value of a lump sum of money
 - Find the effective rate of interest
 - Determine the rate of interest required to double a lump sum of money
 - Determine the time required to double a lump sum of money
 - Determine the present value of a lump sum of money

7.3 Annuities; Sinking Funds

- Annuities
 - Use a spreadsheet to solve problems involving annuities
 - Solve problems involving annuities
- Sinking Funds
 - Solve problems involving sinking funds

7.4 Present Value of an Annuity; Amortization

- Present Value of an Annuity
 - Solve problems involving the present value of an annuity
 - Amortization
 - Finding the value amortized loan
 - Use a spreadsheet to solve problems involving amortization
 - Solve problems involving amortization tables
 - Corporate Bonds
-

- Application: Pricing corporate bonds
- Use a spreadsheet to price corporate bonds

7.5 Annuities and Amortization Using Recursive Sequences

- Annuities and Amortization Using Recursive Sequences
 - Use sequences and a graphing utility to solve annuity problems
 - Use sequences and a graphing utility to solve amortization problems

Chapter 8: Probability

8.1 Sets

- Set Relations and Operations
 - Identify relations between sets
 - Union, intersection and complement of sets
- Venn Diagrams
 - Venn Diagrams

8.2 The Number of Elements in a Set

- Counting Formula
 - Use the Counting Formula
- Applications with Venn Diagrams
 - Use Venn diagrams to analyze survey data

8.3 The Multiplication Principle

- The Multiplication Principle
 - Use the Multiplication Principle

8.4 Sample Spaces and the Assignment of Probabilities

- Sample Spaces
 - Find a sample space
- Assignment of Probabilities
 - Assign probabilities
 - Find probabilities involving equally likely outcomes
 - Construct a probability model

8.5 Properties of the Probability of an Event

- Properties of Probability
 - Find the probability of an event
 - Find the probability of E or F when E or F are mutually exclusive
 - Use the Additive Rule
 - Find the probability of the complement of an event
- Applications of Probability
 - Use a Venn diagram to find probabilities
 - Use the Multiplication Principle to find probabilities
- Odds
 - Compute odds

8.6 Expected Value

- Expected Value
 - Find the expected value
 - Solve applied problems involving expected value
-

Chapter 9: Additional Probability Topics

9.1 Conditional Probability

- Conditional Probability
 - Find a conditional probability
 - Find conditional probabilities from a data table
 - The product rule and tree diagrams

9.2 Independent Events

- Independent Events
 - Show two events are independent
 - Find probabilities for several independent events
 - Find $P(E \cap F)$ for independent events E and F
- Application of Independent Events
 - Model: Optimal testing size for components

9.3 Bayes' Theorem

- Bayes' Theorem
 - Solve probability problems: sample space partitioned into two sets
 - Solve probability problems: sample space partitioned into three sets
- Applications of Bayes' Theorem
 - Use Bayes' Theorem to solve probability problems
 - Find a priori and a posteriori probabilities

9.4 Permutations

- Permutations
 - Evaluate factorials
 - Solve counting problems involving permutations [distinct, without repetition]
 - Solve counting problems involving permutations [distinct, with repetition]

9.5 Combinations

- Combinations
 - Solve counting problems involving combinations
 - Find probabilities using counting techniques
 - Solve counting problems involving permutations of indistinguishable objects

9.6 The Binomial Probability Model

- Binomial Probabilities
 - Find binomial probabilities
 - Find the expected value in a Bernoulli trial
- Applications of Binomial Probabilities
 - Solve applied problems involving the binomial probability model
 - Model: error-correcting codes

Chapter 10: Statistics

10.1 Introduction to Statistics: Data and Sampling

- Data and Sampling
 - Identify continuous and discrete variables
 - Identify sources of bias in a sample
 - Obtain a simple random sample

10.2 Representing Qualitative Data Graphically: Bar Graphs; Pie Charts

- Bar Graphs
 - Construct a bar graph from data
- Pie Charts
 - Construct a pie chart from data
 - Using spreadsheets to construct pie charts from data
 - Analyze a pie chart

10.3 Organizing and Displaying Quantitative Data

- Organizing Data in Frequency Distributions
 - Form a frequency table
 - Group data into class intervals
- Displaying Data in Frequency Distributions
 - Construct a line chart
 - Build a histogram
 - Draw a frequency polygon
 - Draw an ogive
 - Identify the shape of a distribution
 - Using a spreadsheet to graph a histogram

10.4 Measures of Central Tendency

- Calculating Mean
 - Find the mean of a set of data
 - Find the mean for grouped data
- Calculating Median
 - Find the median of a set of data
 - Find the median for grouped data
- Identifying Mode
 - Identify the mode of a set of data

10.5 Measures of Dispersion

- Standard Deviation
 - Find the standard deviation of sample data
 - Find the standard deviation for grouped data
- Empirical Rule and Chebyshev's Theorem
 - Use the Empirical Rule to describe a bell-shaped distribution
 - Use Chebyshev's Theorem

10.6 The Normal Distribution

- The Normal Distribution
 - Properties of the normal distribution and finding Z-scores
 - Use the standard normal curve
- Approximating Binomial Distribution Using the Normal Distribution
 - Approximate a binomial distribution by the standard normal distribution

Chapter 11: Markov Chains; Games

11.1 Markov Chains and Transition Matrices

- Introduction to Markov Chains
 - Find the probability distribution of a Markov chain
 - Applications with Markov Chains
-

- Solve applied problems involving Markov chains

11.2 Regular Markov Chains

- Regular Markov Chains
 - Identify regular Markov chains
- Applications of Regular Markov Chains
 - Find the fixed probability vector of a regular Markov chain
 - Solve applied problems involving regular Markov chains

11.3 Absorbing Markov Chains

- Absorbing Markov Chains
 - Identify absorbing Markov chains
 - Subdivide the transition matrix of an absorbing Markov chain
- Applications of Absorbing Markov Chains
 - Analyze the gambler's ruin problem
 - Model: the rise and fall of stock prices

11.4 Two-Person Games

- Two-Person Games
 - Identify a strictly determined game

11.5 Mixed Strategies

- Mixed Strategies
 - Find the expected payoff

11.6 Optimal Strategy in Two-Person Zero-Sum Games with 2x2 Matrices

- Optimal Strategy in Two-Person Zero-Sum Games
 - Find the optimal strategy
 - Solve applied problems involving games

Chapter 12: Logic

12.1 Propositions

- Introduction to Logic
 - Determine whether a sentence is a proposition
 - Negate a proposition
 - Form compound compositions

12.2 Truth Tables

- Introduction to Truth Tables
 - Construct truth tables
 - Use truth tables to show statements are equivalent
 - Work with properties of propositions

12.3 Implications; The Biconditional Connective; Tautologies

- Conditional and Biconditional Statements
 - Write an implication along with its converse, contrapositive, and inverse
 - Use the biconditional connective

12.4 Arguments

- Direct and Indirect Proofs
 - Use a direct proof
 - Use an indirect proof

12.5 Logic Circuits

- Logic Circuits
 - Construct a logic circuit
 - Redesign a logic circuit

Corequisite Support: A Targeted Review

Chapter 1: Introduction to Real Numbers

1.1 Real Numbers

- Understand and Use Properties of Real Numbers
 - Understand the multiplication and division properties of zero
 - Use the commutative and associative properties
 - Identify additive and multiplicative inverses of a number
- Classifying Real Numbers
 - Identify real numbers
 - Identify rational and irrational numbers
- Introduction to Fractions
 - Locate fractions on a number line and write inequality statements involving fractions
 - Find equivalent fractions
 - Find reciprocals of fractions
 - Understand fractions and their models
 - Simplify a fraction
 - Identify when fractions are equivalent
- Operations with Fractions
 - Add and subtract fractions with unlike denominators
 - Add and subtract fractions with like denominators
 - Multiply fractions
 - Divide fractions
- Convert between Decimals, Fractions, and Percents
 - Convert between percents, decimals, and fractions
 - Convert between fractions and decimals
 - Convert between decimals and percents

Chapter 2: Expressions

2.1 Simplify Expressions

- Simplifying Expressions using Properties and the Order of Operations
 - Simplify expressions using the distributive property
 - Simplify expressions using properties of identities, inverses, and zero
 - Simplify expressions by distributing a negative number
 - Simplify an expression involving absolute value using order of operations
- Simplify Expressions with the Order of Operations
 - Simplify expressions written with a fraction bar
 - Simplify an expression using order of operations
 - Simplify expressions with integers using order of operations
 - Simplify expressions with fractions and decimals

2.2 Evaluate Expressions

- Evaluate Exponential Expressions
 - Evaluate a whole number raised to a power and understand the terminology
- Evaluate Expressions
 - Evaluate variable expressions with fractions
 - Evaluate an expression with factorials
 - Evaluate an expression
- Translate English Phrases to an Algebraic Expression
 - Translate English phrases from applications into algebraic expressions
 - Translate an English phrase to an algebraic expression

2.3 Polynomials

- Introduction to Polynomials
 - Identify coefficients and identify and combine like terms
- Operations with Polynomials
 - Add and subtract monomials
 - Add and subtract polynomials

Chapter 3: Equations and Inequalities

3.1 Translate English Statements into Mathematical Statements

- Translate English statements into Expressions or Equations
 - Translate an English sentence to an algebraic equation and solve using the division and multiplication properties of equality
 - Translate an English sentence to an algebraic equation and solve using the subtraction and addition properties of equality
 - Translate algebraic expressions, equations, and inequalities into English and recognize expressions and equations

3.2 Solve Linear Equations

- Solve Equations using the Addition and Subtract Properties of Equality
 - Verify a solution of an equation
 - Use the subtraction and addition properties of equality to solve application problems
 - Solve an equation using the subtraction and addition properties of equality
 - Solve an equation that requires simplification using the subtraction and addition properties of equality
 - Solve an equation involving fractions or decimals using the subtraction and addition properties of equality
 - Solve Equations using the Multiplication and Division Properties of Equality
 - Use the division and multiplication properties of equality to solve application problems
 - Solve an equation using the division and multiplication properties of equality
 - Solve an equation that requires simplification using the division and multiplication properties of equality
 - Solve an equation involving fractions or decimals using the division and multiplication properties of equality
 - Solving Equations with the Distributive Property
 - Solve an equation using the distributive property with variables on one side
 - Solve an equation using the distributive property with variables on both sides
-

- A General Strategy for Solving Equations
 - Solve equations using cross multiplication
 - Classify equations as conditional, identity, or a contradiction
 - Solve an equation with variables on both sides
 - Solve an equation with constants on both sides
 - Solve an equation with constants and variables on both sides
- Use a General Strategy for Solving Equations with Fractions and Decimals
 - Solve an equation involving fractions by eliminating the fractions and other steps
 - Solve an equation involving decimals by clearing the decimals
 - Solve an equation involving decimals with variables on both sides
 - Solve an equation involving fractions with variables on both sides
 - Solve an equation involving fractions by eliminating the fractions

3.3 Use Formulas While Solving Equations

- Use Formulas While Solving Equations
 - Solve a formula for a given variable
 - Use a formula

3.4 Solve Applications of Percent

- Percent Applications with Equations
 - Translate and solve basic percent equations
 - Solve basic applications of percent

3.5 Linear Inequalities

- Graph Inequalities and Interval Notation
 - Use properties of inequalities
 - Graph an inequality on the number line
 - Express an inequality using interval notation
- Solve Linear Equations
 - Solve simple inequalities in one variable algebraically
 - Translate an English sentence into an inequality and solve
 - Solve one-step applications with linear inequalities

Appendix: Finite Mathematics with Corequisite Support: A Targeted Review

- Number Sense
 - Introduction to Number Sense
 - Prime Factorization and Least Common Multiples
 - Find the GCF and LCM of two or more numbers
 - Understand Terminology
 - Identify constants, coefficients, and variables
 - Algebraic Expressions
 - Expressions
 - Evaluate expressions using summation notation
 - Evaluate algebraic expressions with two variables
 - Evaluate algebraic expressions with a single variable
 - Simplify algebraic expressions
-

- Linear Equations and Inequalities
 - Linear Equations
 - Solving Linear Equations
 - Solve equations in one variable algebraically, variable on both sides
 - Solve equations in one variable algebraically, variable just on one side
 - Linear Inequalities
 - Inequalities, the Number Line, and Interval Notation
 - Use interval notation
 - Solve One-Step Linear Inequalities
 - Solve an inequality using the division and multiplication properties of inequality
 - Solve an inequality using the subtraction and addition properties of inequality
 - Solve Linear Inequalities
 - Classify an inequality as conditional, identity, or contradiction
 - Solve an inequality that requires simplification
 - Solve Compound Inequalities
 - Solve compound inequalities in one variable algebraically
 - Solve a compound inequality involving intersections
 - Geometry
 - Area and Perimeter
 - Find the area of complex shapes including circles
 - Find the perimeter of complex polygons
 - Solve application problems involving area and perimeter
 - Find the area of complex polygons
 - Solve rectangle problems when the width is given in terms of the length
 - Find the perimeter of complex polygons including circles
 - Problem Solving
 - Mixture Problems and Systems of Equations
 - Use the mixture model to solve word problems
 - Exponential and Logarithmic Functions and Their Graphs
 - Exponential Functions
 - Evaluate Exponential Functions with Base e
 - Evaluate exponential functions with base e
 - Evaluate Exponential Functions
 - Evaluate exponential functions from a graph
 - Solve Exponential and Logarithmic Equations
 - Solve Exponential Equations
 - Solve exponential equations with the same base
 - Solve exponential equations without logarithms
 - Solve exponential equations with logarithms
 - Solve Logarithmic Equations
 - Solve logarithmic equations with same base
 - Solve logarithmic equations with different bases
 - Polynomials, Exponents, and Scientific Notation
-

- Polynomials
 - Adding and Subtracting Polynomials
 - Evaluate a polynomial for a given value
 - Identify the types and degrees of polynomials
 - Multiplying Polynomials
 - Multiply a trinomial by a binomial
 - Multiply a binomial by a binomial
 - Multiply a polynomial by a monomial
 - Multiply monomials
 - Exponents
 - Using the Rules of Exponents
 - Use the quotient rule of exponents
 - Use the power rule of exponents
 - Write an exponential function from a description
 - Simplify Expressions Using Rules of Exponents
 - Simplify expressions by applying several properties
 - Simplify expressions using the product property for exponents
 - Negative Exponents
 - Simplify expressions with integer exponents
 - Roots and Radicals
 - Square Roots
 - Understanding Square Roots
 - Estimate square roots and approximate square roots
 - Factoring and Quadratic Equations
 - Factor Polynomials
 - The Greatest Common Factor and Factoring by Grouping
 - Find the greatest common factor of two or more expressions
 - Solve Quadratic Equations
 - Solve a Quadratic Equation by Using the Quadratic Formula
 - Solve a quadratic equation using the quadratic formula with 2 real solutions
 - Sets
 - Sets
 - Understanding and Using Sets
 - Find the difference and cartesian product of two sets
 - Sequences and Series
 - Sequences
 - Sequences of Rational Numbers
 - Write the terms of a sequence defined by an explicit formula
 - Recursive Sequences
 - Write the terms of a sequence defined by a recursive formula with more than one initial term
 - Write the terms of a sequence defined by a recursive formula
 - Arithmetic Sequences
 - Find the common difference of an arithmetic sequence
-

- Write terms of an arithmetic sequence
 - Write an explicit formula for an arithmetic sequence
 - Geometric Sequences
 - Write an explicit formula for a geometric sequence
 - Write terms of a geometric sequence
 - Find the common ratio of a geometric sequence
- Data Presentation and Interpretation
 - Probability, Normal Distributions, Percentiles, Variance, and Standard Deviation
 - Calculate Probability
 - Using a Venn diagram to compute compound and conditional probabilities
 - Calculate probability from bar graph, histogram, or pie
 - Uses of Linear Regression
 - Compute and interpret the sums of squares representing total, explained, and unexplained variation among y-values
 - Determine the prediction errors for data values and trend lines
 - Compute and interpret the coefficient of determination
 - Uses of Linear Regression with Technology – Calculator
 - Calculate the correlation coefficient using Technology – Calculator
 - Determine the best fit linear regression equation using Technology – Calculator
 - Find the linear regression equation given a list of data points – Calculator
- Circuits and Diagrams
 - Circuits and Diagrams
 - Euler Circuits
 - Implement Fleury's algorithm to find Euler circuits when they exist
 - Switching Circuits
 - Determine conditions for when a lightbulb will be turned on in a switching circuit
 - Determine if two switching circuits are equivalent
 - Convert between symbolic statements and switching circuits
